# **Torque-Link-LXRS**

Wireless Torque Sensor

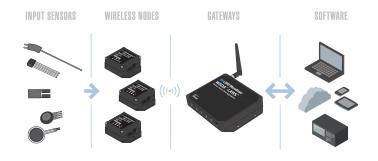

Torque-Link-LXRS - specialized analog sensor node designed to fit over rotating shafts for wireless strain and torque measurements

LORD Sensing LXRS Wireless Sensor Networks enable simultaneous, high-speed sensing and data aggregation from scalable sensor networks. Our wireless sensing systems are ideal for test and measurement, remote monitoring, system performance analysis, and embedded applications.

The gateways are the heart of the LORD Sensing wireless sensing system. They coordinate and maintain wireless transmissions across a network of distributed wireless sensor nodes. Some nodes have integrated sensors, while others are designed with multi-sensor connectivity for application flexibility. The LORD Sensing LXRS wireless communication protocol between LXRS nodes and gateways enable high-speed sampling, ±32 microseconds node-to-node synchronization, and lossless data throughput under most operating conditions.

Users can easily program nodes for continuous, periodic burst, or event-triggered sampling with the Node Commander software. The optional web-based SensorCloud interface optimizes data aggregation, analysis, presentation, and alerts for sensor data from remote networks.

Wireless Simplicity, Hardwired Reliability™

# **Product Highlights**

- Two to four inch shaft (standard), more sizes available on request
- One or two differential analog input channels designed for full-bridge strain gauge integration
- Ideal for static and dynamic torque measurements with full
  temperature compensation and bending cancellation
- Rugged ABS housing designed for remote, long-term installation on cylindrical shafts
- User-programmable sample rates up to 4096 Hz
- Application-specific design available on request

### **Features and Benefits**

#### High Performance

 Lossless data throughput and synchronized node-to-node sampling of ±32 μS in LXRS-enabled modes

#### Ease of Use

- · Wireless framework reduces installation complexity
- Installs over existing strain elements and shafts with no mechanical modifications
- Configurable housing geometry will accommodate any shaft size
- Easy custom integration with open-source, comprehensive communications and command library (API)
- Wireless data transmission allows installation on rotating components without a slip ring

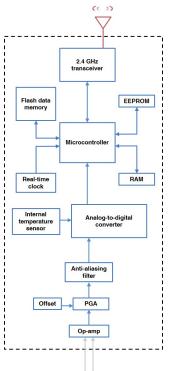

## Applications

- Condition-based monitoring
- Health monitoring of rotating components, aircraft, structures, and vehicles
- Static and dynamic torque measurements

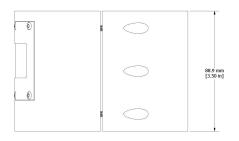

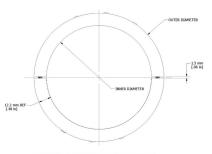

# **Specifications**

General			
Sensor input channels	Differential analog, 1 channel (standard), 2 channels (optional)		
Integrated sensors	Internal temperature, 1 channel		
Data storage capacity	2 M Bytes (up to data points)		
	Analog Input Channels		
Selectable measurement ranges	Differential: ± 1.22 mV dc to 156 mV dc Single-ended: ±2.56 V dc, ±5.12 V dc, ±10.24 V dc, 0 to 5.12 V dc, 0 to 10.24 V dc		
Single-ended input impedance	1 Mohm		
Measurement range	Strain: full-bridge, ≥ 350 Ω		
Resolution	16 bit		
Accuracy	±0.1% full scale typical		
Anti-aliasing filter bandwidth	Single-pole Butterworth -3 dB cutoff @ 500 Hz		
Bridge excitation voltage	+ 3 V dc (pulsed @ sample rates ≤16 Hz to conserve power)		
Measurement gain and offset	20 to 2560, user-set in software		
	egrated Temperature Channel		
Measurement range	-40 °C to 85 °C, ±2 °C (at 25 °C) typical		
Resolution	12 bit		
Sampling			
Sampling modes	Synchronized, low duty cycle, datalogging		
Sampling rates	Continuous sampling: 1 sample/hour to 512 Hz Periodic burst sampling: 32 Hz to 4096 Hz Datalogging: 32 Hz to 4096 Hz		
Sample rate stability	±3 ppm		
Network capacity	Up to 2000 nodes per RF channel depending on settings. See: http://www.microstrain.com/configure-your-system		
Synchronization between nodes	± 32 µsec		
	Operating Parameters		
Wireless communication range			
·	Operating Parameters		
Wireless communication range Radio frequency (RF) transceiver	Operating Parameters        100 m (typical)        2.405 to 2.475 GHz spread spectrum over 14 channels,		
Wireless communication range Radio frequency (RF) transceiver carrier	Operating Parameters        100 m (typical)        2.405 to 2.475 GHz spread spectrum over 14 channels, power settings from 0 dBm (1 mW) to 16 dBm (39 mW)		
Wireless communication range Radio frequency (RF) transceiver carrier RF communication protocol	Operating Parameters        100 m (typical)        2.405 to 2.475 GHz spread spectrum over 14 channels, power settings from 0 dBm (1 mW) to 16 dBm (39 mW)        IEEE 802.15.4        Replaceable, non-rechargeable battery pack (3.0 V dc, 1.2 Ah		
Wireless communication range Radio frequency (RF) transceiver carrier RF communication protocol Power source	Operating Parameters        100 m (typical)        2.405 to 2.475 GHz spread spectrum over 14 channels, power settings from 0 dBm (1 mW) to 16 dBm (39 mW)        IEEE 802.15.4        Replaceable, non-rechargeable battery pack (3.0 V dc, 1.2 Ah Li/MnO <sup>2</sup> batteries in series configuration)		
Wireless communication range      Radio frequency (RF) transceiver      carrier      RF communication protocol      Power source      Power consumption	Operating Parameters        100 m (typical)        2.405 to 2.475 GHz spread spectrum over 14 channels, power settings from 0 dBm (1 mW) to 16 dBm (39 mW)        IEEE 802.15.4        Replaceable, non-rechargeable battery pack (3.0 V dc, 1.2 Ah Li/MnO <sup>2</sup> batteries in series configuration)        1 to 25 mA (configuration dependent, see user manual)		
Wireless communication range      Radio frequency (RF) transceiver      carrier      RF communication protocol      Power source      Power consumption      Operating temperature      Angular acceleration limit	Operating Parameters        100 m (typical)        2.405 to 2.475 GHz spread spectrum over 14 channels, power settings from 0 dBm (1 mW) to 16 dBm (39 mW)        IEEE 802.15.4        Replaceable, non-rechargeable battery pack (3.0 V dc, 1.2 Ah Li/MnO <sup>2</sup> batteries in series configuration)        1 to 25 mA (configuration dependent, see user manual)        -20 °C to + 80 °C        500 g standard (high g option available)        2500 to 4200 RPM (diameter dependent, see user manual,		
Wireless communication range      Radio frequency (RF) transceiver      carrier      RF communication protocol      Power source      Power consumption      Operating temperature	Operating Parameters        100 m (typical)        2.405 to 2.475 GHz spread spectrum over 14 channels, power settings from 0 dBm (1 mW) to 16 dBm (39 mW)        IEEE 802.15.4        Replaceable, non-rechargeable battery pack (3.0 V dc, 1.2 Ah Li/MnO <sup>2</sup> batteries in series configuration)        1 to 25 mA (configuration dependent, see user manual)        -20 °C to + 80 °C        500 g standard (high g option available)        2500 to 4200 RPM (diameter dependent, see user manual, high RPM option available)		
Wireless communication range      Radio frequency (RF) transceiver      carrier      RF communication protocol      Power source      Power consumption      Operating temperature      Angular acceleration limit	Operating Parameters        100 m (typical)        2.405 to 2.475 GHz spread spectrum over 14 channels, power settings from 0 dBm (1 mW) to 16 dBm (39 mW)        IEEE 802.15.4        Replaceable, non-rechargeable battery pack (3.0 V dc, 1.2 Ah Li/MnO <sup>2</sup> batteries in series configuration)        1 to 25 mA (configuration dependent, see user manual)        -20 °C to + 80 °C        500 g standard (high g option available)        2500 to 4200 RPM (diameter dependent, see user manual, high RPM option available)        Physical Specifications
